

GIS Response to the Christchurch Earthquakes - Getting Started, Keeping it Going, Living with it.

Kyle Dow (New Zealand)

Key words: Capacity building; Risk management; Spatial planning

SUMMARY

Being in the thick of an emergency response is something that is unfamiliar to most people. So it's probably no surprise that managing a GIS service or any form of spatial/data management in that environment is no easy task. There are lots of things to consider, from the technical things such as access to data and data management to ensuring your staff working in a very high stress situation are available and coping ok.

This talk will discuss what happen in Christchurch and what we learnt to hopefully enable us and others to be better prepared when the need arises again.
