SUMMARY

After 10 years of work United Nations initiative on Global Geospatial Information Management (UN-GGIM) draws on the national capacities and capabilities of Member States. It takes a leading role in setting the agenda for global geospatial information development and promotes the benefits of geospatial information for addressing national policy and key global challenges. UNGGIM serv as a mechanism for making joint decisions and setting directions with regard to the production, availability and use of geospatial information within national, regional and global policy frameworks. Led by United Nations Member States, UN-GGIM Europe aims to address european regional challenges regarding the use of geospatial information, including in the development agendas, and to serve as a body for regional policymaking in the field of geospatial information management. Governance and institutional arrangements present a clear division of roles and responsibilities among organizations involved in geospatial information management, and the formal and informal structures of cooperation and collaboration between and among organizations.

In this paper will be present strategy of UN GGIM Europe and activities of working gropus within work program. There will be also present Integrated Geospatial Information Framework (IGIF) which provides a basis and guide for developing, integrating, strengthening and maximizing geospatial information management and related resources in all countries.
